

IN THE SPECIFICATION:

Please amend the paragraph beginning on page 39, line 2, as follows:

At the time of carrying out additional print processing_ of the image of the photographic print 62B, the order information processing section 74 94 outputs to the encoder section 72, the order information recorded on the photographic print 62B, as well as information, which relates to the processing conditions at the print processing device 10 such as the exposure conditions at the time of exposing the photographic printing paper 50 on the basis of this image data and the like, and information showing that the image is a copied image (hereinafter called "copy information"). The encoder section 72 encodes the copy information in a two-dimensional bar code (makes the information into a two-dimensional bar code), and outputs it to the label writer 66.
